

NEW PAD & ROTOR BREAK-IN PROCEDURE

Find a safe location where you can perform all three break-in stages without causing danger to yourself or other motorists. Stages 1-3 should be executed in the sequence shown below.

STAGE 1:

Using very moderate brake pedal effort (25% or less pedal effort), execute 4 gradual stops from 60 mph down to 0 mph.

STAGE 2:

Using medium brake pedal effort (50% pedal effort), execute 6 “rolling” stops from 50 mph down to 10 mph. Drive for approximately 60 seconds without braking in between each of the 6 rolling stops.

After all 6 rolling stops are completed, drive for approximately 3 minutes to allow the rotors and pads to cool.

STAGE 3:

Using medium-hard pedal effort (about 75% pedal effort), execute 4 “rolling” stops from 60 mph down to 15 mph.

After all 4 rolling stops are completed, drive for at least 10 minutes without using the brakes (or with very gentle use of the brakes) to allow the rotors and pads to cool.
